

Gyeme

- Gyeme is an application which manages the trainers and members of a meme-themed Gym with three locations
- Gym staff are able to add members and trainers to the application.
- Trainers who work in the Gyeme facilities will be able to add and manage classes which they are hosting to the site for members to see.
- We are also working on an extra feature, which is a blog, where trainers can make posts and members can view and comment on those posts.

Features

- Image Uploading
- CRUD operations for users
- CRUD operations for classes
- Authentication
- Authorization
- CRUD operations for blog posts

Technology

- [React.js](#)
